

**Graduate Programs in Molecular Biosciences  
ROTATION FORM**

By signing this form, each student and faculty member *acknowledge the following*:

- While a nine-week rotation may not be enough time to achieve a great deal in the laboratory, students are expected to put forth a reasonable effort to make the rotation experience valuable--both for the student and for the laboratory.
- Students are taking their first-year classes and will not be able to devote all their time to lab rotation research projects. **Students are advised to strike a balance between lab work and course work; rotation faculty are asked to be mindful and supportive of this advice.**
- At the **completion** of each rotation, laboratory rotation advisors are asked to fill out a Rotation Evaluation Survey. This information is crucial in helping the First Year Advisory Committee track student laboratory performance. **A link for this survey will be emailed to the rotation PI and is to be completed by the PI.**
- **Students are required to write a summary of their rotation, which should be signed by the rotation PI and submitted to the Lab Rotation Canvas site.** The written summary is required for the student to receive credit for the rotation.
- **Rotation Faculty are reminded that they are allowed to have no more than 2 rotation students per rotation period, and a maximum of 5 rotation students per year.**

Student Name: \_\_\_\_\_

Lab Rotation # \_\_\_\_\_

Professor in whose laboratory you will be rotating:
